About me

I am a 25 years old webdesigner, design and technology interests me since my childhood. I already participated in multiple projects during my high school years and made websites, logos and graphics as a hobby. I do 2D graphics in my free time, following and applying the latest technologies and trends. I adapt quickly and like professional challenges. I possess several years of experience with the majority of Adobe products, mostly Photoshop, Illustrator and Premiere Pro, however I am also familiar with the rest of the product family. In the last years I took part in numerous graphical projects, and worked as photographer and video editor as well.
